immediate-early protein - suid herpesvirus 1 (strain Kaplan)
C:Species: suid herpesvirus 1
C;Date: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 09-Jul-2004
C;Accession: A45344
R:Vlcek, C:; Kozmik, Z:; Paces, V:; Schirm, S:; Schwyzer, M.
Virology 179, 365-377, 1990
A;Title: Pseudorabies virus immediate-early gene overlaps with an oppositely orie
A;Reference number: A45344; MUID:91021039; PMID:2171211
A;Reference number: A45344
A;Status: translation not shown
A;Molecule type: DNA
A;Residues: 1-1446 <VLC>
A;Residues: 1-1446 <VLC>
A;C;Superfamily: herpesvirus immediate-early protein IE175
C;Keywords: DNA binding; early protein; transcription regulation

A;Title: Evidence for a previously undetected sequence at the carboxyterminus of the alph A;Title: Evidence number: A90181; MUID:72243016; PMID:5047697

A;Accession: A90181

A;Accession: A90181

A;Molecule type: protein

A;Residues: 1037-1042 eEYR>
A;Experimental source: skin
A;Experimental source: above correspond to the carboxyl end of the protein
C;Comment: Lysines at positions 103, 700, 934, and 946 above may be hydroxylated in some
C;Comment: Most of the prolines at the third position of the tripeptide repeating unit (C;Comment: Pro-1002 is the only 3-hydroxypoline and the only hydroxylated proline in post C;Superfamily; collagen alpha 1(I) chain; fibrillar collagen carboxyl-terminal homology; C;Keywords: coiled coil; extracellular matrix; glycoprotein; pyroglutamic acid; trimer; triller; triller
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Collagen alpha 1(I) chain - chicken (tentative sequence) (fragments)

BHLF1 protein - human herpesvirus 4 (strain B95-8)
C;Species: human herpesvirus 4, Epstein-Barr virus
C;Date: 25-Feb-1985 #sequence_revision 25-Feb-1985 #text_c
C;Accession: A03742
C;Accession: A03742

Sequence 3, Application US/09723450

Patent No. 6576751

GENERAL INFORMATION:
APPLICANT: Alnemri, Emad S.
TITLE OF INVENTION: Fadd-Like Anti-Apoptotic Molecules, Methods Of Using The Same, An TITLE OF INVENTION: Compositions For And Methods Of Making The Same
FILE REFERENCE: TUJU2445

CURRENT APPLICATION NUMBER: US/09/723,450

CURRENT FILING DATE: 190-03-26

PRIOR APPLICATION UNUMBER: 09/276,993

PRIOR FILING DATE: 199-03-26

PRIOR APPLICATION UNMBER: 09/859,167

PRIOR APPLICATION NUMBER: 08/859,167

PRIOR FILING DATE: 199-05-20

NUMBER OF SEQ ID NOS: 17

SOFTWARE: PatentIn version 3.0

SEQ ID NO 3

LENGTH: 1045

TYPE: DNA
ORGANISM: Artificial Sequence
; NAME/KEY: misc feature
; OTHER INFORMATION: NO. 6
; NAME/KEY: CDS
; LOCATION: (88)..(1044)
US-09-723-450-3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δ
                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 7

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                     Sequence 5, Application Patent No. 6063760 GENERAL INFORMATION:
APPLICANT: Alnemri, Emad S.
APPLICANT: Fernandez-Alnemri, Teresa
TITLE OF INVENTION: FADD-LIKE ANTI-APOPTOTIC MOLECULES, METHODS
TITLE OF INVENTION: USING THE SAME, AND COMPOSITIONS FOR AND MET
TITLE OF INVENTION: Of MAKING THE SAME
NUMBER OF SEQUENCES: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        555
